

GRANT DENNEY

AI Solutions & Implementation · Product Direction · Client-Facing Delivery

Papillion, NE (Omaha metro) | Open to remote | 402-213-8153 | Grant@GrantDenney.com

linkedin.com/in/GrantDenney | github.com/grant9008 | pocketge.com | scootywraps.com

SUMMARY

Works out what to build, then builds it. Uses AI development tools to take a product from idea to something real people use, and keeps deciding what it needs next: a live market-data tool, a Java plugin published to an official code-reviewed marketplace, and a sim-racing telemetry overlay, all shipped and still running. Brings implementation experience from a different domain, standing up Covid testing operations on-site from **Boston to Bali** for production crews of **100+**, scoping each engagement, training every incoming group into the process, directing contracted clinical teams, and holding studio executives and talent to deadlines where one miss stopped the shoot. Separately runs a six-year wrap business that **Segway** engages directly for brand and marketing work, including templates used in a **Red Bull** activation and custom scooters gifted to NFL players. Looking for work that combines the two: helping a company work out what AI can actually do for it, then delivering it.

CORE COMPETENCIES

AI & Product	Claude & Claude Code · ChatGPT · Gemini · Grok · Prompt design and iteration · Deciding what to build next · Rapid prototyping to production · Shipping and iterating on live products
Solutions & Impl.	Requirements gathering · Customer onboarding · Technical documentation · Troubleshooting & root-cause analysis · Product demos and technical walkthroughs · Escalation handling · Project coordination
Stakeholders	Executive and C-suite communication · Client and vendor management · Cross-functional coordination · Translating technical detail for non-technical audiences · Deadline and crisis management
Technical	<i>Used in AI-assisted builds:</i> JavaScript · HTML/CSS · Java · Node.js · Electron · Python scripting · REST APIs & JSON · Git & GitHub · PWAs · WordPress · Shopify · Wix
Data & Growth	Google Analytics / GA4 · Google Ads & Keyword Planner · Meta (Facebook/Instagram) Ads · Influencer marketing · Email campaigns · Conversion & event tracking · Technical SEO · DealerSocket CRM · Adobe Illustrator · 3D scanning and digital cutting software

PROFESSIONAL EXPERIENCE

Founder & Operator, Scooty Wraps

Dec 2019 – Present

Custom vinyl wraps for electric scooters · direct-to-consumer and brand / marketing work · Omaha, NE · Remote and on-site

- Built and have run the business for six years, selling **thousands of wraps** and owning the Shopify storefront, product design, paid social, email, fulfillment, and customer support. Advanced to the producer video-interview stage of ABC's **Shark Tank** application process.
- **Segway reaches out directly** for one-off marketing wrap jobs, including **10,000 neck wraps** for a corporate scooter giveaway event; also produce retail kits for Segway/Ninebot models and **Apollo Scooters**, turning complex hardware geometry into exact-fit templates with 3D scanning and digital cutting software.
- Developed the multi-panel wrap kit templates and supplied vinyl kits for Segway go-karts used at the **Red Bull Showrun Houston** event, enabling Segway and Red Bull to produce multiple color variants; their designer applied logos and artwork on top of the templates.
- Partnered with the marketing and gifting contact for Buccaneers wide receiver **Mike Evans** to produce custom-wrapped scooters as teammate gifts, traveling to Tampa to complete the wraps on-site. Also worked with the event center hosting a **Jonas Brothers** concert to produce wrapped scooters used around the stadium.
- Built the site and its SEO from scratch: model-specific landing pages and structured titles put scootywraps.com on the **first page of search for category terms**, alongside Amazon and national vinyl retailers. Drove **thousands of inbound wrap requests**, plus an audience across YouTube, Instagram, TikTok, and Facebook.

Independent Product Builder & Web Consultant, Self-employed

2016 – Present

Omaha / Papillion, NE · Remote

- Take an idea to a running, publicly used product: scoping the feature, building it with AI development tools, verifying it works, and shipping and maintaining it in the open. **PocketGE** and a companion Java plugin both came out of that loop and are still live.
- Ship, then find and fix what breaks in real use, updating and polishing continuously. The judgment is knowing where AI tools are reliable, where they quietly break, and what the product needs next.
- Client web and analytics work: built the site for **Phoenix Flooring** (pfomaha.com) and set up their analytics and local SEO.
- Ran paid and lifecycle marketing on own ventures: a **dropshipping Shopify store** before Scooty Wraps (Facebook/Instagram ads, influencer marketing, keyword-planned search campaigns), plus email campaigns for Scooty Wraps.

Covid Testing Coordinator & Lead Coordinator, PURE Sets

Aug 2021 – Nov 2022

Global Operations / Meetings & Events · Los Angeles, CA · Remote and on-site (Atlanta, New York, international)

- Owned testing logistics, schedules, and cadences for production crews of **100+ people** on major film, commercial, and music projects. Nobody worked without a valid test, on timelines where a single scheduling miss stops a shoot.
- Ran the cadence on **high-cost testing programs**: crews of 100+ testing two to three times per shoot at \$150–200 per standard test, and \$400–600 for traveling-nurse visits to principal talent, producers, and studio VIPs.
- **Deployed on-site as the lead for live-event testing in Boston, Hawaii, San Diego, and Bali**: setting up the testing room, directing the contracted local clinic team, running 100+ people through daily, reporting positive results, and meeting the corporate testing guidelines set by **Maritz Global Events**, which contracted PURE Sets for these traveling engagements.
- Acted as the daily point of contact for **C-suite executives, studio VIPs, high-profile talent, clients, and crew**: onboarded each incoming crew into the process, walked executives and talent through it step by step, absorbed the pressure, and fixed operational problems rather than escalating them.

"PURE Sets was confident sending Grant in the field and knew that if we wanted the job done right, he was the 'go-to' team member to get it done. ... His ability to communicate effectively with C-suite executives, high level music and film talent, and studio VIPs was outstanding."

Megan C. Murphy, Testing Department Lead, Global Operations, PURE Sets · full letter available on request

BMW Genius / Product Specialist, Bob Smith BMW

Dec 2017 – Mar 2018

Calabasas, CA

- Translated vehicle technology and technical feature sets for non-technical buyers in a consultative setting; averaged **6 vehicle sales per month** working walk-ins and structured DealerSocket CRM follow-up.

Valet Attendant, Horseshoe Casino (Caesars Entertainment)

Nov 2012 – Jul 2016

Part of the team that posted the highest guest-satisfaction scores across Caesars Entertainment worldwide for 13 consecutive weeks.

SELECTED PROJECTS

PocketGE · pocketge.com · open source · live

A free, mobile-first trading tool for the Old School RuneScape Grand Exchange, shipped as a PWA with no login and all user data kept in the browser. Live margin scanning with the 2% transaction tax in every calculation, a 5-day breakout scanner, volume-profile charts from 1 day to 5 years, watchlists with push alerts, and portfolio tracking. Plain HTML, CSS, and vanilla JavaScript, no framework or bundler, against the public OSRS Wiki price API, with client-side caching and rate-limited background scanning to stay fast on phones.

PocketGE Flip Tracker · Java · published on the official RuneLite Plugin Hub

RuneLite plugin that records incremental Grand Exchange fills across all 8 offer slots, matches sells against earlier buys FIFO per item, and books profit net of the 2% GE tax. Submitted to and merged into the official `rune-lite/plugin-hub` repository, which requires maintainer code review before a plugin ships to users.

iRaceHUD · iRacing telemetry overlay · Node.js + Electron + WebSocket

Transparent always-on-top HUD that reads live sim telemetry over a WebSocket backend and displays lap delta, rolling consistency grading, and a track map colored live by throttle and brake input while driving.

Town & Country Animal Rescue · unsolicited spec build, not yet delivered · 2026

Self-hosted WordPress build (WP core on SQLite, custom child theme, full page and navigation structure) produced on my own initiative as a pitch to a local Papillion, NE animal rescue, with GA4 event tracking. Built to demonstrate the work before asking for the engagement; not yet deployed.

EDUCATION & TRAINING

University of Nebraska Omaha, B.S. Business Administration, Entrepreneurship focus · 3.5 GPA

2012 – 2016

Dale Carnegie Training, Skills for Success (28 hrs) and Sales Advantage (24 hrs) · Los Angeles, CA

2019
